ITL STERILISER COMMENCES OPERATION

ITL Healthcare, a member of the ITL Group, today announced that its new ethylene oxide steriliser has been fully commissioned and validated and is now in commercial operation.

ITL Healthcare, based in Chelsea Heights, Victoria, is a leading producer and supplier of custom medical procedure packs to the Australian hospital sector. Previously, sterilisation of all products manufactured by ITL Healthcare was outsourced to a third party sterilisation provider.

"The commissioning and validation of our own steriliser means that ITL now operates a fully integrated packing and sterilisation facility. This will lead to continued improvements to the service that we are able to provide to our customers and ensures that our control of the management of quality throughout the entire production process is enhanced," said ITL CEO Bill Mobbs.

ITL's new ten pallet steriliser was supplied and installed by the leading US manufacturer of medical sterilisation systems. At the heart of the emission control system is a twin tower wet scrubber, supplied by a global leader in emission control technology. The passive system is start-of-the-art and meets world's best practice standards for emission control, operational safety and reliability. A fully integrated computer control system ensures that the system operates within tightly controlled parameters to achieve the highest levels of reproducibility, quality and safety.

"With the new steriliser online, the final stage of the development of the Chelsea Heights facility is complete. The ITL Healthcare business is now well placed to maintain and grow a leadership position in the supply of custom medical procedure packs to Australian hospitals," said Bill Mobbs.
